

The Online Learning Centre provides you with the information on the book, the profile of the authors, a small demo of the CD ROM packaged with some of the books (ISBN NO. 0-07-040271-X) and a sample web designing tutorial for additional practice along with the book.

Readers also have the facility of giving their feedback on querying the authors to seek clarifications.

### Salient features:

- ◆ Treatment not intimidating even to complete beginners
- ◆ Covers HTML features in adequate depth – Forms, Tables, Frames and Style Sheets.
- ◆ Shows how to insert pictures and embed audio/video files into the web site.
- ◆ Good detailing of image maps – used to direct visitors to appropriate sections of a web site.
- ◆ Introduces advanced web programming concepts – Java Script, Active Server Pages and CGI.
- ◆ Appendices on Cascading Style Sheets (CSS2), HTML 4.0, XML and Java Script.
- ◆ Setting up a web server, Testing and Uploading a website, Indexing using META tags.

## Welcome User

Thank you for purchasing this book and CD-ROM. This CD-ROM contains the basic software needed to build a web site. Most of the software contained within the CD-ROM is either freeware or shareware. The CD-ROM also has some extra examples and tutorials of web publishing.

### Instructions for installation of software:

There is a short description of the software along with a link which allows you to install the software. When you click this link you will see the following screens.
